

## INTENSIVE 30/7 COMPLETE MIX FOR CARP FATTENING

INTENSIVE is the food intended for higher intensity of production per unit area. INTENSIVE RIBOKS line is synonymous with quality and perfection in production of 2500 kg / ha and more, depending on the size of the facility and the level of equipment. The balanced meal is achieved according to the latest knowledge, both from the test center and from the production, and it always provides reliability, both in achieving the desired pieces of mass in relation to the density of individual fish, as well as in the economic part that always justifies the stake in such production. The largest application is in a two-year cycle production. Monitoring and control of biological production is also indispensable for each production in earthy facilities.

Ddgs, corn, corn gluten, hemoglobin, wheat, pap, wheat flour, fish meal, fish oil, soybean cake, soybean oil, sunflower meal, vitamin and mineral mix.

### User manual:

Feeding should be carried out exclusively at marked nourishing sites that are determined depending on the type of food (floating, sinking). The amount of daily meals is determined by the size of the facility, the density of the plantations and the amount of natural food in the facility. For food control and optimization of consumption, it is recommended to use floating food, of course, if there are no limiting factors.
